

Gardi Pools from 1swim.com

GardiPool is a unique concept in swimming pools based on years of experience in the timber industry. It's a fully integrated product from tree to treated finished product. We supervise the entire process in-house.

The GardiPool concept brings beauty and functionality together in a quality swimming pool. Top of the bill is our **unique, patented system of dovetail joints**.

The joints are reinforced by a **stainless steel threaded bar** which allows the frame to be tightened or taken apart with ease at any time.

The dovetail joints mean there are no protruding parts, making it as safe **and child friendly** as can be.

The **extra thick pool hardwood surround coping is secured** on top of the basic structure. They are made in **one piece** to avoid any distortion, and are held in place by lateral supports which hide the fasteners and create a visually pleasing finish.

The pipework is joined using special connectors, so there's **no need for glue or other fasteners**.

Functionality - the surround coping is reinforced so you can easily sit on the side of the pool.

Aesthetics: thanks to the attractive shape of the surround coping and the lateral supports. And don't forget the appeal of those dovetail joints!
